Location: Online
Time: Sundays 1:00 4:00 Monthly

Prerequisite: Clinical Phase or Concentration may be taken in the 3rd year if the student has completed the Foundation Phase of the program but has not entered the Clinical Phase of the CTP program.

Course Description

Therapeutic trance states can be very effective tools for the practice of psychotherapy, often helping the client to more easily uncover unconscious feelings and thoughts. Therapeutic trance also allows the client to tap his or her wise inner self, which possesses awareness and a healing capacity not available in the ordinary waking state. Surprisingly, the powerful tools of therapeutic trance (including hypnosis) are not used by many psychotherapists, largely because the actual nature of this therapeutic aid is wrongly understood. This course will explain the real nature of trance states in general (which are part of ordinary life) and therapeutic trances in particular. It will assist the therapist in learning how to facilitate these states and how to use them within psychotherapeutic practice, also providing an initial acquaintance with the use of finger signals. This is the basic course on the use of trance states in psychotherapy. Other courses are available for those who have completed this one.
